**DETAILED ACTION**

Claims 1-16 are pending and at issue for examination.

***Election/Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 10-14, drawn to a reverse transcriptase polypeptide, classified in class 435, subclass 194.
- II. Claims 5-9, drawn to an polynucleotide encoding a reverse transcriptase polypeptide, classified in class 536, subclass 23.1.
- III. Claims 15-16, drawn to a method for reverse transcription, classified in class 435, subclass 91.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to divergent molecules having different functions and effects. The polynucleotides can be used in hybridization assays as well as in expression methods for producing the polypeptides. The polypeptides function as polymerase polypeptides.

Inventions I and inventions III are related as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1)

Art Unit: 1652

the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the polypeptide of group I can be used in a materially different process such as one in which the polypeptide is used to synthesize antibodies against the polypeptide.

The polynucleotide of group II is unrelated to the method of group III, as they are neither used nor made by the method of group III.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the literature and sequence searches required for each of the Groups are not required for another of the Groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
